

Become part of our team - as Cloud Developer

- You have good programming skills in Java and Angular?
- You have basic knowledge of cloud technologies?
- You have strong analytical skills and are enthusiastic about technology?

Then you are exactly right with us!

Your tasks in our team include:

- Software development
- Design and implementation of IoT/4.0 applications
- Participate in all phases of the project, including requirements analysis, design, and testing
- Preparation of change request analyses, technical specifications and effort estimates
- Taking over the project management with regard to planning, design and software development

scitis.io stands for generating knowledge from machine data. With our Industrial IoT platform, machine builders and operators can collect and analyze data and perform AI projects, for example. We are convinced that digitalization is the greatest opportunity of the future. This is also reflected in the way we work: Whether at home or in our office in Stuttgart, we can collaborate from anywhere. Team spirit is particularly important to us and everyone can contribute with their ideas!

We are a young team of currently 12 employees. If you feel addressed and would like to become part of scitis.io then send your application to: people@scitis.io
